TOUCHKEY FULL-STACK ARCHITECTURE: GUI, CLI SCRIPTS, SQLITE STORE, TELEMETRY & 3-PHASE ENGINE PIPELINE (ADB <-> OS DRIVERS)

LAYER 1: BOOTSTRAP, CLI SCRIPTS, ADB UTILITIES & DUAL-MODE DIALOGS (modules.scripts.* & modules.ui.*)

1A_EnvironmentProfiler & ADB Discovery
Environment Profiling & ADB Device Discovery

Hard Config	Checks SDK_TOUCHSTORE_NUM_SHARDS, ANDROID_SERIAL, ADB_PATH
Hard_Failure	Missing SDK root, no devices found, multiple devices without ANDROID_SERIAL
Failure Reporting	Raises exact map of available emulators/devices/adb output; loads touchkey.setup_TTL.ebash

1B_Platform Bootstrap & Orchestrator
Platform Detection, Dependency Installation & Launch Orchestration

Privilege Escalation	Win32: re-launches via ShellExecuteW("runas", ...) if not admin; Linux/macOS: re-launches via sudo -E if not root
CLI Error Setup	setup_errors() installs interceptor & platform-tools / setup_linux() writes UDEV_RULE_PATH & reloads udevadm
Desktop Shortcuts	Win32: PowerShell WScript.Shell -> %userDesktop%.lnk (pythonw.exe -m modules.ui.gui) / Linux: %userDesktop.desktop (0o755)
Uninstall & Purge	--uninstall: rd /s /q %APPDATA% + %LOCALAPPDATA% + %USERPROFILE%\.touchkey_db + shortcuts / --purge: + %USERPROFILE%\Documents\TouchKey_Recordings + %USERPROFILE%\Desktop\TouchKey_Recordings.lnk

1C_ADB Screen Capture & Window Geometry
Screen Capture, Window Geometry & Coordinate Mapping

Device Matrix	get_adb_devices() -> get_device_dpi() -> get_adb_wm_size() -> get_adb_wm_density() -> DEVICE_MATRIX[serial] = {width, height, dpi}
ADB Screencap	get_adb_screencap_as_bitmap(serial=None, use_png=False) -> adb exec-out screencap [-p] -> decode_image_buffer() -> (bitmap, width, height)
PIL & Layout Sync	image_size() -> (w, h) / detect_window_size() -> (w, h) / sync_window_size(w, h) -> move_resize_window(w, h) / get_window_size() -> (w, h)
Window SDK	CLI: windows_controls.exe/linux-x11 -> WindowControlResult{ok, message} / WindowControlResult{ok, message, data: {x, y, w, h}}

1D_CLI Launch Profile & Settings Persistence
Profile & Store Path Resolution, Settings Persistence & Global Flags

Profile & Store Path	--db, --dpi, --adb, --seed, --dry-run -> DB_PATH, ADB_PATH, SEED, DRY_RUN (module-level globals)
Auto-Capture CLI	--list-zones, --set-bounds ID TOP BOT, --edit-zone ID [--zone-config zone_name=value,...], --reset-zone, --delete-zone
Bootstrap & Purge	--setup-touchkey-tools, --edit-layout-config, --uninstall, --purge, --purge-all [--force] -> calls setup_errors() / setup_linux()
Global Tuning & I/O	normalize_key_seq() -> (t, x, y) tuples; "+x" speed; "+size" / "-size" pressure; "+dur" stroke; "+wait" / "-wait" pauses; "+text" quoted; "+key" keyevent; input=/path/file.touchkey; --raw-database

1E_Dual-Mode Bit-Grid Dialog & Key Injector
Window Enumeration, Bit-Grid Dialog & Key Injection

Window Enumeration	_gather_window_info()/_enumWindowsCallback: find_visible_windows() -> [{hwnd, title, x, y, w, h}] sorted by area desc
CLI Selector	1 tile activated: calls run_bg(), returns {"ok": True, "hwnd": ..., "title": ..., "x": ..., "y": ..., "w": ..., "h": ...}
Esc/ Selector	0 tiles activated: calls run_bg(), returns {"ok": False, "error": "cancelled"}
Capture Key Toggle	Ctrl+Alt+CapsLock(Win) & Fn(Linux/Pynput) -> (t, x, y) tuple; toggle_hotkey() using ctypes.user32 / pynput.keyboard.GlobalHotKeys

1F_Bootstrap & ImportErrorDialogUser
Bootstrap Entry Point & Missing-Dependency Dialog

ImportErrorDialogUser	Message engine multiprocessing.Process, holds lock for (service_id, window_title, x, y, w, h) -> (service_id, window_title, x, y, w, h)
Copy & Install Commands	[ImportError logic: running ChoiceDialog(...).run() -> ("install", "skip", "cancel")] -> [ChoiceDialog.run() from Tk.mainloop]
Copy & Action Events	_event_id_map(service_id, window_title, x, y, w, h) -> (service_id, window_title, x, y, w, h) / _event_id_map[event_id] -> (service_id, window_title, x, y, w, h)

1G_SettingsPage (Live Tweaks & Release Summary)
Live Tweaks, Release Summary & Persistence

Dispatcher Hooks	Populates ON_RELOAD -> reload_requested=True & ON_TWEAK -> tweak_events.append((target, type, payload)) for Event Thread
Live Tweaks	Emits ON_TWEAK(target, type, payload) for Event Thread to apply to Engine / Service
Response Telemetry	last_response = {status: ok, req_id: 42, event_count: 1, latency_ms: 3.2} -> Rendered in Telemetry Tab
Accurate Memory	_push(cpu_percent) normalized by cpu_count() -> push(memory_full_info) -> selected by perfect() -> Rendered in Memory Tab

1H_SettingsPage (Hardware Buttons, Key Filters & Debounced Writes)
Hardware & Window Buttons, Key Filters & Debounced Writes

Hardware & Window	Select Target Window -> ON_TWEAK("_WINDOW_CHANGE") / Kill & Restart Backend orders backend_fast_shutdown -> ON_SYSTEM_CHANGE
Key Filters & Timing	Toggle Key Filters -> ON_TWEAK("_KEY_FILTER_CHANGE") / Debounced Timing Sliders -> ON_TWEAK("_TIMING_CHANGE") / Reset Timing to Defaults -> Service
Debounced Text Writes	[store_event] handles: window_id, _on_title_edit, _on_class_edit, _on_proc_edit, _on_timing_entry, _on_timing_reset -> Service
Immediate Toggles	set_handler, fuzzing_pause(), archive(), push(), typematic_enabled, fast_trigger_tap_enabled, tweak_toggle_enabled -> immediate ones existing update() -> ON_RELOAD

1I_LayoutEditorPage (Preview Editor & Persistent Helper)
Preview Editor, Persistent Helper & Layout Persistence

Left Sidebar (Profiles)	Icon: [A] database, [a] service, [p] profile, [ui] UIDEF Files, [S] SettingsPage, [M] Mutex, [L] LOG, [T] TELEMETRY, [K] KEYBOARD
Right Sidebar (Zones)	Page 1: TapZone Icon: Backspace, Mic, Emoji, Enter, Space, Numbers, Shift, Page 2: Zone Presets, Symbols, Numbers, Shift, Page 3: Zone Presets, Symbols, Numbers, Shift
Universal Controls	_confirm_unsaved() prompts before profile switch, duplicate, import, export, or image change; _on_inspector_value_changed updates PyQuickEdit
